

1	<p>Adjustment for Logo size to fit on form and report headers. Individual Logos can vary in size considerably, so may need manual adjustment following upgrade to this release.</p> <p>Note – the logo file is a bitmap image stored in the “C:\FrameSmart6\print” folder, named ‘FSbiglogo.bmp’. This file can be edited using MS-Paint (or other utility) to change its size to fit the space available on the form headings.</p>
2	Quick fixes for usability issues – re-instates Enter key to move from artwork Width to Height; provides ability to Quit from Logon screen.
3	Matboards selected from the price point buttons (for extra mounting/backing etc.) now save properly in the job price, and appear correctly on the worksheet.
4	Mat Reveal is now saving and appearing correctly on the worksheet.
5	“GST added” now showing correctly on the invoice.
6	GST (added) no longer appearing as a payment amount on a Statement.
7	Statements – “All completed owing” now filtering correctly.
8	Banking Report - Unallocated payments now summarised correctly.
9	Now able to send bulk texts/emails from the Pick Ups screen button (again). This was a technical communications problem, now overcome.
10	Sales Value report - Sales Orders no longer listed when replaced by Invoices.
11	Pick-up job screen – now able to back out of a mistaken Pick Up action – checks with user before processing.
12	An overpayment on an Invoice in the Pick Up screen now puts the overpaid amount as an unallocated credit on the account (rather than on the Invoice).
13	A Delivery address no longer carries over from a previous record when creating a new customer card.
14	VisualEdge Mouldings now show as discontinued (NZ only) – requires a FLO update in FSv6 to activate.
15	Evolution Framing Supplies now coming over from FLO (Aus only) – requires a FLO update in FSv6 to activate.
16	Fixes problem with a message appearing “There is already a Master installation for this licence”, caused by some PCs not returning a unique Guid/serial number to the software when licence details are checked against the PSL customer database.
17	The FrameSmartv6 software Master installation now checks any Slave installations on the business network for compatibility with the installed database, i.e. Slave PCs must be running the same software version as the Master. FSv6 issues a warning to upgrade all PCs if a mismatch is detected.
